Welcome to the AI4PEP bi-weekly News Brief. In this edition, we present the highlights from the third Asia cohort bi-weekly meeting, featuring updates from Brazil, Dominican Republic, and Peru.

Prof. Kong introduced a collaborative opportunity: responding to a UN Call for papers on AI Governance. Bonidia (Team Brazil) volunteered to lead, promoting a comparative analysis approach to highlight diverse perspectives.

Team Brazil focused on countering fake news by empowering users to discern credible health information. Remarkably, they achieved 94% accuracy in identifying reliable sources. Another key achievement was that their paper was accepted for publication. It was titled: "BioPrediction - Democratizing Machine Learning in the Study of Molecular Interactions." More details can be found here: https://www.bracis.dcc.ufmg.br/call-for-papers

Team Dominican Republic had the opportunity to engage with Ministry of Health Representatives. The lead, Dr. Manuel Colome, had the opportunity to be featured in a local newspaper and radio show.

Team Peru has been navigating administrative processes and were seeking assistance for structuring their work and social media engagement to ensure maximum impact.

In the closing remarks, partners were encouraged to collaborate, learn, and apply for the Canadian Conference on Global Health.

Stay tuned for more updates as the Asia cohort continues its impactful journey in AI4PEP!
